Re: End of Sale of Agilent/BioTek ELx808 Microplate Reader

Agilent (formally known as BioTek) announced to their supply partners that they will be discontinuing the sale of the ELx808 plate reader as outlined in the following schedule:

- End of supply of ELx808IU to ACC November 2023.
- End of service for all ELX808 models date January 2029

Agilent has indicated that they are only selling through partners for the remainder of the year to help ensure that they have an ample supply of parts to allow for at least five years of support for the product once it is discontinued.

Further, ACC is currently evaluating plate reader replacement alternatives and as such, once a reader has been selected, we will be validating the supporting endotoxin software, Pyros® eXpress for use with the selected reader.

We appreciate your understanding in this matter and will provide updates as they become available.
