**Notification RE: Change to Fungitell<sup>®</sup> Assay Kit Configuration. Please note, this is for your information only. No action is required.**

Dear Valued Customer:

You are receiving this letter because you have purchased our Fungitell<sup>®</sup> products in the past. Associates of Cape Cod, Inc. (ACC) is pleased to announce a new and improved kit configuration and corresponding packaging for our FT001 Fungitell<sup>®</sup> Assay. The changes are outlined as follows:

- Two (2) vials of pre-combined alkaline pretreatment solution will be added to the kit in lieu of one (1) vial of KCl and one (1) vial of KOH – eliminating the mixing step
- Microplates will be removed from kit packaging due to expiration date concerns impacting the life of kits
- IFU (*Instructions for Use*) will be printed in English only, additional languages will be available online
- New box to accommodate new configuration
- New carrier inserts for product integrity during shipping and storage
- Recyclable packaging

As indicated in our recent letter dated December 7, 2017, microplates will be offered as follows:

- CA961-10 96-well microplate - 10 pack
- CA961-50 96-well microplate - 50 pack

We anticipate this change being fully implemented between April and May of 2018. Once this transition is complete, you will need to order microplates separately. For additional information, please contact our Clinical Product Manager Celeste Jones at 1+ (508) 444-1469, or your local representative. We appreciate your business, and will continue to provide you with industry leading products and services to meet your current and future needs.

Sincerely,

Vann Jones  
Senior Manager, Marketing
