Notification RE: Update to Custom Certificate of Analysis Templates

Dear Valued Customer:

ACC is updating the lot of Reference Standard Endotoxin (RSE) used in testing. As a result, the concentration value listed on custom CoAs will be updated from "10,000 EU/vial" to "11,000 EU/vial."

This update affects the concentration values shown on the CoAs only and does not impact the validity of any previous potency testing performed. All potency values determined at the time of testing remain valid through the expiration dates listed on the certificates.

Please note that, in accordance with USP <85>, it remains the responsibility of the end user to confirm the sensitivity of the lysate before use.

ACC expects to transition to this new formatting by Q3, 2025.

We appreciate your continued partnership and remain committed to providing high-quality endotoxin and glucan detection solutions to meet your needs.

Sincerely,

A handwritten signature in black ink that reads "Roger Withers". The signature is written in a cursive, flowing style.
